Fit and fun - climbing to new heights

Static exercise using high-tech machines is outdated. The latest fitness trend is a workout that gives sports enthusiasts the chance to push themselves to the limits while being gentle on the joints, muscles and tendons.

ErgoWall sets entirely new standards when it comes to training for climbing. On this innovative, multi-purpose fitness machine, you can reach high altitudes while staying near the ground. What makes ErgoWall so special is its versatility: Thanks to a wide range of selectable settings, ErgoWall is adaptable to your personal training goals. Features such as speed, wall inclination and level of difficulty can be adjusted to suit your needs. This ensures a high level of motivation, a fun time and great training results.

Climbing not only improves your athletic performance by increasing your strength and flexibility, but it's also a great deal of fun. And the best part about it is: You get your body into shape!

Climbing has always been a form of locomotion. From childhood on, we feel the urge to climb on things. Climbing as a sporting activity, however, has only been established over the years. Reasons for performing this activity include strengthening your muscles, improving your physical condition and pushing your limits.

ErgoWall is your sportive companion for a variety of activities. In a training session that is gentle on the muscles and joints, athletes push themselves to the limits. Select from a wide range of training programs: From an easy training all the way to an intensive workout – ErgoWall offers everything that sports fans are looking for. Thanks to ErgoWall, going to the gym now is a thing of the past!

Climbing not only improves your health and well-being – it's also a bunch of fun! Mountain climbers preparing for their next tour as well as athletes and adventurers are always looking for new and convenient opportunities for climbing.

In both sport and leisure climbing, ErgoWall is a true all-rounder. Whether you prefer wall or overhanging climbing: Fans of climbing choose from a wide range of programs. With a maximum inclination angle of 45° and a speed between 0 and 14 m/min , ErgoWall offers a large variety of training options. Adventurers and climbing aficionados are sure to find full satisfaction!

FUN

The motivation gained by reaching a big goal is a special experience – especially for kids. This also applies to therapeutic climbing. Positive side effects include improving your coordination, training your body tension and boosting your self-confidence. In addition, kids learn to concentrate, to plan their actions and to stick to rules.

New times have brought new challenges which call for new methods of treatment. Physiotherapists, rehabilitation therapists and psychotherapists are beginning to take note of this trend. While classic types of treatment for different ailments used to be sufficient, modern times require more individual solutions.

ErgoWall opens up entirely new perspectives in therapeutic climbing. Thanks to ErgoWall, which has been designed by integrating the latest discoveries in therapy, innovative therapeutic concepts can be put into practice in no time. This way, patients enjoy great, lasting success.

Due to our modern lifestyle, tensions and pains have become commonplace – regardless of age. Regular backache is on the increase; standing up becomes a torture. Special exercise brings your body back in balance, enhances your quality of life and is a lot of fun.

In the field of prevention, ErgoWall is considered as an insider tip. Your posture improves dramatically and affected areas of the body are significantly strengthened. This has an intense and lasting effect. Thanks to ErgoWall, fitness, vitality and physical well-being are just a hop, skip and jump away!
